Problem setup Java JDK onto Windows 10

searched java in cmd but not found? here's steps to solve it

Java is essential for big data analysis (to use Hadoop/apache spark etc).

Here is simple installation guide for Java JDK for win 10

Windows 10 users:

1. Use command prompt to check java is installed in your pc or not.

Type 'java' in your command prompt. Your java version will be showed if it is installed.

```
C:\Users\Aspire>java
Usage: java [-options] class [args...]
           (to execute a class)
 or java [-options] -jar jarfile [args...]
           (to execute a jar file)
where options include:
-d32      use a 32-bit data model if available
-d64      use a 64-bit data model if available
-server   to select the "server" VM
           The default VM is server.
```

Download Java from website below. You can check your Windows system through Search → system information <https://www.oracle.com/technetwork/java/javase/downloads/jdk8-downloads-2133151.html>

Setup of java jdk

Go to 'path' > system properties > advanced > environment variables > User Variables > path

Click 'edit' for path

if this 'c:\Program Files\Java\jdk-12\bin' is not found under path even though u installed java jdk, create one under path

open command prompt, check your java version. setup done

```
C:\Users\Aspire>javac --version
javac 12
```
